IMAGEMOVER

Imaging workflow, simplified.

Helping the heightened need for point of care ultrasound with COVID-19.

Ultrasound is playing a critical role in bed-side management of COVID-19 patients. Associating point of care images with the patient is challenging, time consuming, and risky when not completed. ImageMover simplifies the process with order automation. Images are easily viewable in the patient's record, revenue leakage is prevented, and legal risk is reduced.
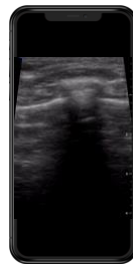

How it Works:

Modality quick order on one device
Real-time image capture at the point of care with automated order creation on the same device to satisfy reimbursement requirements.

Scan patient wristband
to create order

Capture point of care images*

or

Send/store in
PACS/VNA

Modality quick order through the EHR
Real-time image capture at the point-of-care with automated order creation to satisfy reimbursement requirements.

Access patient encounter
to automate order creation

Capture point of care images*

or

Send/store in
PACS/VNA

ImageMover is also available in Epic's App Orchard.
